

# Don't pour grease or cooking oils down the sink.

If you pour grease down the sink, it will solidify and clog the pipes. You should collect the grease and take it to the recycling station.

By doing this you reduce costs for the property owner and for Mälarenergi, who is responsible for the water pipes and sewer system in Västerås.

## How to best dispose cooking oils and grease:

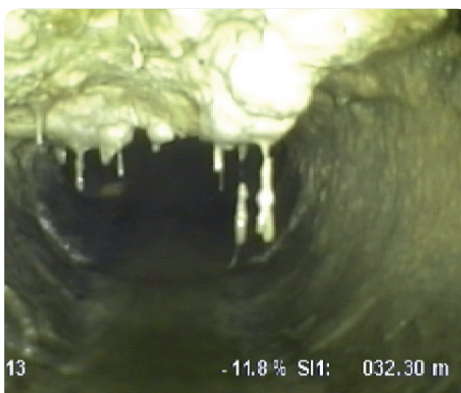

- Liquid fat, e.g. cooking oils, frying oils, and marinades, can be poured into a PET bottle or any other kind of plastic bottle after it has cooled down. Bring the bottle to the recycling station (max. 2 litres at a time).

**Help us**  
keeping the  
pipes clean!

### USE THE FAT FUNNEL.

It's easy to collect fat with the fat funnel. You can get one from Mälarenergi. (Mälarhuset, Sjöhagsvägen 3 or at Energi-smarta hemmet at IKEA in Västerås).

### FULL OF GREASE.

A pipe that is full of grease can cause disruptions such as blockages, unpleasant odour, or damage to the sewer system.

### THE GREASE IS TURNED INTO NEW PRODUCTS.

After the grease has been cleaned and refined, it can be recycled and used as raw material for new products.
